Elbow Kit Instructions

"In-Floor Heating Made Simple"

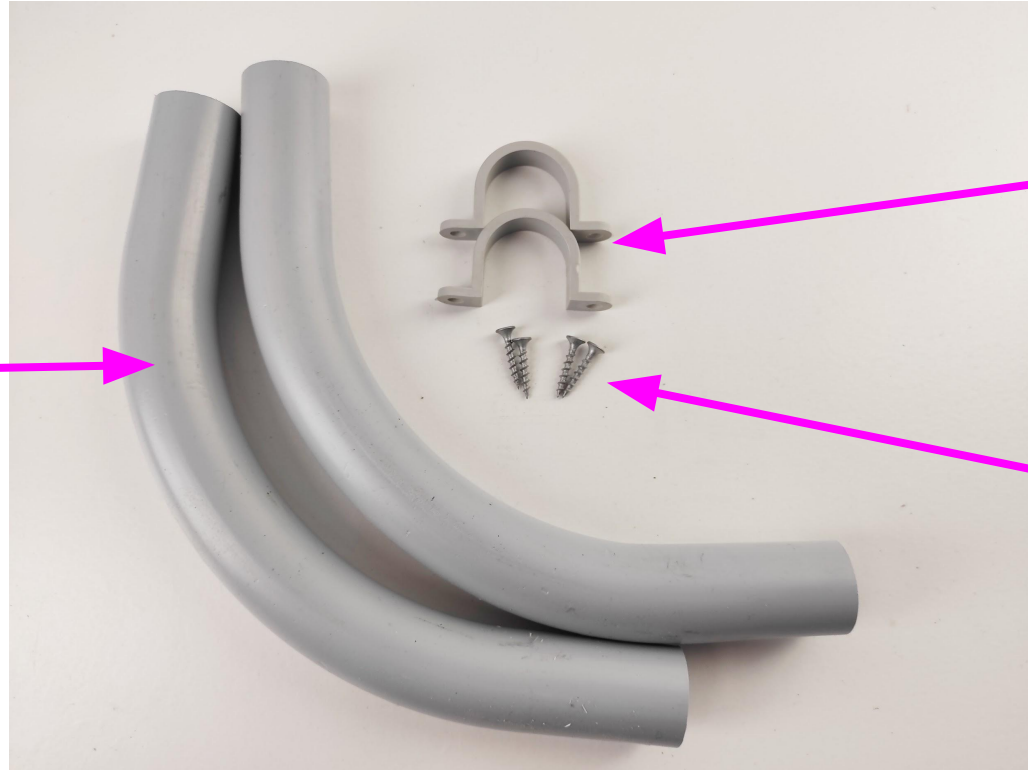

The elbow kit is designed to hold and control PEX piping for your in-floor hydronic heat system. Each kit will handle 1 loop of PEX piping.

Pex Piping being rolled out on the pink foam on a new build.

Your Elbow Kit

2) PVC elbows

2) PVC conduit clamps

4) screws

1) The elbows are the beginning and end of each PEX loop.

Place them where you want your PEX hose to come in and out of the floor.

2) Screw the elbow kits into place with the conduit clamps.

3) Start each PEX loop by running it through an elbow.

Staple or zip tie your loop into place according to your plans. End the Pex loop by running it through the elbow next to the starting loop elbow
